I lead teams that ship enterprise .NET, cloud and full-stack systems — and I wire LLMs, RAG and agents into them so AI runs in production, not in a demo.

// SKILLS

AI & LLMs
Azure OpenAI, AWS Bedrock, OpenAI / Claude APIs, Semantic Kernel, RAG, pgvector, Azure AI Search, MCP & tool calling, Prompt engineering, LLM evals

Backend
.NET 8 / .NET Core, C#, ASP.NET Web API, Entity Framework Core, LINQ, Node.js, Express, REST, OAuth

Frontend
React, Angular, TypeScript, JavaScript ES6+, Vite, Shadcn UI, Bootstrap

Cloud & DevOps
Azure, AWS, Kubernetes, Docker, Terraform, Azure DevOps, YAML pipelines, GitHub, Datadog

Data
MS SQL Server, PostgreSQL, SQL

Leadership
Team leadership, SAFe / Agile, Code reviews, Architecture, Client demos, Engineering standards

// YEARS HANDS-ON

C#	10 yrs
ASP.NET Web API	10 yrs
MS SQL Server	10 yrs
JavaScript	10 yrs
LINQ	10 yrs
.NET Core	8 yrs
Git	8 yrs
Azure	7 yrs
Angular	7 yrs
TypeScript	7 yrs
Entity Framework Core	6 yrs
CI/CD pipelines	5 yrs
Docker	4 yrs
Kubernetes	4 yrs
Terraform	4 yrs
Azure DevOps	4 yrs
Node.js	3 yrs
AWS	2 yrs
PostgreSQL	2 yrs
React	1.5 yrs

// PROFILE

Technical Lead with 10+ years across .NET, Node.js, React, Angular, Azure and AWS. I have taken monoliths to microservices, stood up Dev-to-Prod Kubernetes environments, and led SAFe teams through PI planning to client demos. Today my focus is AI integration: putting large language models behind the same RBAC, pipelines, monitoring and cost controls as every other service — so they are safe, measurable and worth paying for.

// ★ AI INTEGRATION

Models brought into the stacks I have run for a decade — same auth, same pipelines, same monitoring, measured in production.

LLMs in production. Azure OpenAI, AWS Bedrock, OpenAI and Claude APIs wired into .NET 8 and Node.js services — streaming, retries, rate limits and per-feature cost budgets.
`Azure OpenAI · Bedrock · Semantic Kernel`

RAG over company data. Retrieval on the databases teams already run: embeddings in PostgreSQL pgvector or Azure AI Search, chunking, citations, and answers grounded in the source.
`pgvector · Azure AI Search · Embeddings`

Agents & tool calling. Function calling and MCP servers that expose internal REST APIs to models through the same RBAC middleware — the model can only do what the user could.
`MCP · Function calling · RBAC`

Secure by design. Prompt-injection guards, PII redaction, keys in AWS Secrets Manager / Key Vault, OAuth on every hop, and an audit log of each model call.
`OAuth · Secrets · Guardrails`

LLMOps in the pipeline. Prompts versioned in Git, eval suites run in YAML CI/CD on every pull request, blue-green rollout of model changes, tokens and latency in Datadog.
`Evals · CI/CD · Datadog`

AI-accelerated delivery. Copilot and Claude Code in the team workflow with human code-review gates — faster sprints without lowering engineering standards.
`Copilot · Claude Code · Code review`

// EDUCATION

B.Tech, Information Technology
Raj Kumar Goel Engineering College, Ghaziabad · 2011 – 2015

// LANGUAGES

English, Hindi

// EXPERIENCE

★ AI Integration Expert — Enterprise AI integration, Alongside every role below — Now

- Integrating LLM features into existing .NET, Node.js and React products — chat, summarisation, extraction and search over business data.
- Designing RAG and agent architectures on Azure and AWS that reuse existing APIs, auth and pipelines instead of a parallel "AI stack".
- Setting team standards for AI-assisted coding, evaluation of model output, and safe handling of customer data in prompts.

Team Lead — Thrivepass, Delhi — Jul 2026 - Present

- Leading a team of software developers and QA engineers.
- Running sprint planning, coordination and deliveries.
- Code reviews for quality, engineering standards and performance.

Technical Lead — Marlabs Innovations, Bangalore · Remote — Sep 2021 - Apr 2026

- **Vairkko** — full-stack tech lead on .NET 8, C#, Web API, SQL, Node.js, React and AWS; owned the workflow end to end, from frontend to API integration.
- Refactored a legacy monolith into Express.js microservices; built secure REST endpoints handling **millions of requests a week** with central RBAC, logging and validation middleware.
- React with Context API, Vite and Shadcn UI; lazy loading and `useMemo` cut rendering latency on high-volume patient data grids.
- AWS: EC2, Lambda, ECS/Fargate, S3, CloudFront, API Gateway, Secrets Manager — provisioned with Terraform.
- **gWorks** — Team Lead on .NET, Entity Framework, PostgreSQL, Node.js and Angular: architecture decisions, task assignment, sprint demos to the client, SAFe PI planning.
- Azure: separate Dev, QA, UAT, Load-Test and Prod environments; YAML CI/CD on pull requests; .NET Core on Kubernetes with blue-green clusters.

Module Lead — Mindtree, Pune — Dec 2020 - Sep 2021

- Built Web APIs, middleware and utility classes; build and release on Azure DevOps.
- Delegated work across the module team by individual strengths.
- Wrote analyses of emerging technologies and presented them to 3 clients.

Senior Associate — Publicis Sapient, Gurgaon — Mar 2020 - Dec 2020

- Web APIs, middleware and client sprint demos; releases on TFS.
- Code-health checks with SonarQube; trained and onboarded new team members.

Full-Stack Web Developer — Optsoft IT Business Solutions, New Delhi — Mar 2017 - Feb 2020

- End-to-end delivery: UI, backend, database, deployment and demos to the PO.
- Shipped three cross-platform mobile apps in Xamarin.

Software Developer — TTSIT, Gorakhpur — Oct 2015 - Jan 2017

- Worked across the SDLC from requirements to production releases; modernised legacy code bases.
